

Fourth of July Safety Tips

- **Never leave alcoholic drinks unattended where pets can reach them.** Alcoholic beverages have the potential to poison pets. If ingested, the animal could become very intoxicated and weak, severely depressed or could go into a coma. Death from respiratory failure is also a possibility in severe cases.
- **Do not apply any sunscreen or insect repellent product to your pet that is not labeled specifically for use on animals.** Ingestion of sunscreen products can result in drooling, vomiting, diarrhea, excessive thirst and lethargy. The misuse of insect repellent that contains DEET can lead to neurological problems.
- **Always keep matches and lighter fluid out of your pets' reach.** Certain types of matches contain chlorates, which could potentially damage blood cells and result in difficulty breathing – or even kidney disease in severe cases. Lighter fluid can be irritating to the skin and if ingested can produce gastrointestinal

irritation and central nervous system depression. If lighter fluid is inhaled, aspiration pneumonia and breathing problems could develop.

- **Keep your pets on their normal diet.** Any change, even for one meal, can give your pet severe indigestion and diarrhea. This is particularly true for older animals who have more delicate digestive systems and nutritional requirements. And keep in mind that foods such as onions, chocolate, coffee, avocado, grapes and raisins, salt and yeast dough can all be potentially toxic to companion animals.
- **Do not put glow jewelry on your pets, or allow them to play with it.** While the luminescent substance contained in these products is not highly toxic, excessive drooling and gastrointestinal irritation could still result from ingestions, and intestinal blockage could occur from swallowing large pieces of the plastic containers.
- **Keep citronella candles, insect coils, and oil products out of reach.** Ingestions can produce stomach irritation and possibly even

central nervous system depression. If inhaled, the oils could cause aspiration pneumonia in pets.

- **Never use fireworks around pets!** While exposure to lit fireworks can potentially result in severe burns and/or trauma to the face and paws of curious pets, even unused fireworks can pose a danger. Many types contain potentially toxic substances, including potassium nitrate, arsenic and other heavy metals.
- **Loud, crowded fireworks displays are no fun for pets,** so please resist the urge to take them to 4th of July shows. Instead, keep them in a quiet, sheltered and escape-proof area at home. Leave a television or radio on at normal volume while you are away. If you know your pet becomes seriously distressed by loud noises, consult with your veterinarian before July 4th to discuss ways to alleviate the fear and anxiety that your pet will experience during fireworks displays.
- **Never leave pets outside unattended, even in a fenced yard or on a chain.** In their fear, pets who normally wouldn't leave the yard

may escape or become lost, or become entangled in their chain, risking injury or death.

- ✿ Make sure your pets are wearing identification tags so that if they do become lost, they can be returned promptly. Animals found running at-large should be taken to the local animal shelter, where they will have the best chance of being reunited with their owners.
